JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

same as when last reported, and the port is apparently free from quarantinable diseases.

Respectfully,

D. W. GOODMAN,
Acting Assistant Surgeon, U. S. M. S.

The SURGEON-GENERAL,
U. S. Marine-Hospital Service.

One case yellow fever present.

[Telegram.]

PORT LIMON, COSTA RICA, *June 12, 1901.*

One case yellow fever.

GOODMAN.

The SURGEON-GENERAL,
U. S. Marine-Hospital Service.

CUBA.

Report from Havana—One case of yellow fever.

HAVANA, CUBA, *June 11, 1901.*

SIR: I have the honor to submit the following report of transactions at this station for the week ended June 8, 1901:

The yellow fever report for the week shows 1 case and no deaths, the above case being reported on the 5th instant.

On the 6th instant Asst. Surg. T. D. Berry reported from Cienfuegos that there were 2 cases of smallpox at Jucaro. An officer of this service was immediately ordered by wire from Cienfuegos to Jucaro and departed that night, with sufficient virus to vaccinate crews and passengers embarking and landing at that port. Jucaro is a small port situated on the south coast of the province of Puerto Principe, and in the past was only of importance in that it was the port of entry for the town of Ciego De Avila, the latter being situated on the military railroad which connects Jucaro on the south coast with Moron on the north. At the present time, the port is of some importance, owing to the fact that the Cuban Central Railroad Company, which is engaged in constructing a railroad from Havana to Santiago, is landing a large amount of supplies and equipment at the port, thus assembling a considerable number of employees, the majority of whom are probably not immune to yellow fever.

A case of smallpox was reported, unofficially, from Manzanillo, but upon inquiry the case proved to be one of chicken pox.

During the past week and for some time previous there have arrived at this port a large number of Chinese, the majority having come in bond from San Francisco via New Orleans. It is believed that most of these Chinese are coming to the island in order to gain entrance from here into the United States.

Attention is respectfully invited to the number of vessels disinfected during the week. This is an increase in the number of vessels, also the quantity of dunnage, over last year's report for the same period.

Acting Asst. Surg. F. E. Menocal reports that there were no immigrants or third class passengers examined by the immigration depart-
